GCSE ECONOMICS

8136/1

Paper 1 How Markets Work

Mark scheme

Predicted Paper — Advanced

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers.

This mark scheme is for a predicted paper in the style of AQA GCSE Economics 8136/1 (How Markets Work). The format, command words, mark allocation and Assessment Objectives mirror the June 2024 paper.

It must be stressed that a mark scheme is a working document. Indicative content is provided as a guide for examiners. It is not intended to be exhaustive and other valid points should be credited. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

KEY LIST

01	B – how scarce resources are allocated to satisfy unlimited wants	02	B – Enterprise
03	C – £24 000	04	C – Boredom and dissatisfaction from repetitive tasks
05	C – £83.1 bn	06	D – 77%
07	B – The firm invests in more efficient machinery that also reduces pollution	08	C – Equilibrium price and quantity of Y both fall
09	D – Firm D	10	B – Total revenue will rise by approximately 4%

Qu	Part	Marking guidance	Total marks
11		State two forms of non-price competition that firms may use.	2
		AO1 = 2 1 mark for each valid form (max 2). Possible answers: • advertising and marketing • branding / brand identity • product differentiation (different features or styles) • improving product quality • improving customer service / after-sales service • loyalty schemes and reward points • new / innovative product features <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>	

Qu	Part	Marking guidance	Total marks												
12		Explain one possible impact of a highly competitive market on the efficiency of firms.	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Possible impact on efficiency explained.</td></tr><tr><td>1</td><td>1</td><td>Possible impact on efficiency identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • firms must minimise costs to compete on price → productive efficiency rises • inefficient firms make losses and exit the market → average efficiency of the industry improves • pressure to innovate / improve productivity to keep up with rivals • firms must respond quickly to consumer demands → allocative efficiency improves <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>		Level	Marks	Description	2	2	Possible impact on efficiency explained.	1	1	Possible impact on efficiency identified.		0	Nothing written worthy of credit.
Level	Marks	Description													
2	2	Possible impact on efficiency explained.													
1	1	Possible impact on efficiency identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks												
13		Explain why the foreign exchange (forex) market is an example of a market.	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Reason explained.</td></tr><tr><td>1</td><td>1</td><td>Reason identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • buyers (those wanting a foreign currency) and sellers (those wanting to sell it) come into contact • there is demand (e.g. from importers / tourists / investors) and supply (e.g. from exporters / central banks) of currencies • the exchange rate (price) is determined by supply and demand for each currency <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>	Level	Marks	Description	2	2	Reason explained.	1	1	Reason identified.		0	Nothing written worthy of credit.	
Level	Marks	Description													
2	2	Reason explained.													
1	1	Reason identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks
14	1	Calculate the firm's profit margin to the nearest whole %.	2
		AO2 = 2 • Total revenue = £108 000 • Total variable costs = £24 × 1 200 = £28 800 • Total costs = £28 000 + £28 800 = £56 800 • Profit = £108 000 – £56 800 = £51 200 • Profit margin = £51 200 ÷ £108 000 × 100 = 47.4% ≈ 47% 1 mark for correct method with correct figures but incorrect final answer. 1 mark for a correctly calculated profit figure (£51 200) but incorrect margin. 2 marks for a correct answer with no working shown.	

Qu	Part	Marking guidance	Total marks												
14	2	Explain one way the software firm could increase its profit margin.	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Possible way explained.</td></tr><tr><td>1</td><td>1</td><td>Possible way identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • raise the subscription price (provided demand is inelastic) • cut variable costs (e.g. cheaper cloud-hosting, automation) • cut fixed costs (e.g. reduced office space, remote working) • increase sales at the same cost base (spreading fixed costs) • introduce a higher-priced premium tier • focus on retention to reduce customer-acquisition costs <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>	Level	Marks	Description	2	2	Possible way explained.	1	1	Possible way identified.		0	Nothing written worthy of credit.	
Level	Marks	Description													
2	2	Possible way explained.													
1	1	Possible way identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks															
15		Analyse the possible impact of rising input costs such as those shown in Figure 1 upon UK manufacturing firms and the markets in which they operate.	6															
		AO2 = 2, AO3 = 4 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>3</td><td>5–6</td><td>A full analysis of the economic evidence, a well-developed and logical chain of reasoning.</td></tr><tr><td>2</td><td>3–4</td><td>An incomplete analysis of the economic evidence, starts to develop a chain of reasoning. Good application of knowledge and understanding of concepts/issues mostly relevant to the context.</td></tr><tr><td>1</td><td>1–2</td><td>Analysis of discrete points of the economic evidence with no chain of reasoning attempted. Basic application of knowledge and understanding of concepts/issues with limited relevance to the context.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Indicative content: • higher input costs shift the supply curve to the left → higher equilibrium prices in output markets • firms face reduced profit margins if unable to pass costs on • firms may cut production or lay off staff to reduce costs → possible unemployment • smaller or less well-capitalised firms may exit the market → reduced competition in the long run • input costs may be passed on as higher prices → contributing to cost-push inflation • consumers may switch to substitutes or imports → reduced UK market share • firms may respond by investing in efficiency / alternative inputs / automation in the longer run • reference to data: gas prices rose 141%, electricity 86% — extreme increases concentrated in energy-intensive sectors (steel, chemicals) <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>		Level	Marks	Description	3	5–6	A full analysis of the economic evidence, a well-developed and logical chain of reasoning.	2	3–4	An incomplete analysis of the economic evidence, starts to develop a chain of reasoning. Good application of knowledge and understanding of concepts/issues mostly relevant to the context.	1	1–2	Analysis of discrete points of the economic evidence with no chain of reasoning attempted. Basic application of knowledge and understanding of concepts/issues with limited relevance to the context.		0	Nothing written worthy of credit.
Level	Marks	Description																
3	5–6	A full analysis of the economic evidence, a well-developed and logical chain of reasoning.																
2	3–4	An incomplete analysis of the economic evidence, starts to develop a chain of reasoning. Good application of knowledge and understanding of concepts/issues mostly relevant to the context.																
1	1–2	Analysis of discrete points of the economic evidence with no chain of reasoning attempted. Basic application of knowledge and understanding of concepts/issues with limited relevance to the context.																
	0	Nothing written worthy of credit.																

Qu	Part	Marking guidance	Total marks
16		State two possible barriers to entry that firms in an industry might face.	2
		AO1 = 2 1 mark for each valid barrier (max 2). Possible answers: • high start-up / fixed costs • economies of scale enjoyed by established firms • strong brand loyalty of existing firms • patents, copyrights and licences • control of essential inputs / distribution by incumbents • government regulations / licensing requirements • predatory pricing by incumbents <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>	

Qu	Part	Marking guidance	Total marks												
17		Explain one possible reason why investment bankers in the City of London tend to earn significantly more than secondary school teachers.	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Possible reason explained.</td></tr><tr><td>1</td><td>1</td><td>Possible reason identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • investment banking requires highly specialised quantitative/financial skills in limited supply • banks compete globally for top talent → wages bid upwards • bankers' output is linked to very large financial transactions, so their marginal revenue product is extremely high • teachers are relatively numerous; training pathways are well established → larger labour supply • the government (monopsony) largely determines teacher pay, constraining wage rises • long, unsocial hours and stress in banking attract compensating wage differentials <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>	Level	Marks	Description	2	2	Possible reason explained.	1	1	Possible reason identified.		0	Nothing written worthy of credit.	
Level	Marks	Description													
2	2	Possible reason explained.													
1	1	Possible reason identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks												
18		Explain one possible reason why the demand for a life-saving prescription drug such as insulin is likely to be price inelastic .	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Possible reason explained.</td></tr><tr><td>1</td><td>1</td><td>Possible reason identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • insulin is a necessity — patients cannot survive long without it, so they will pay almost any price • there are no or very few close substitutes for the specific drug • the decision to use insulin is driven by medical need, not price • many patients' costs are covered by the NHS or insurance → they are not price-sensitive at point of use • a clear, general explanation of 'price inelastic' without reference to insulin = 1 mark <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>		Level	Marks	Description	2	2	Possible reason explained.	1	1	Possible reason identified.		0	Nothing written worthy of credit.
Level	Marks	Description													
2	2	Possible reason explained.													
1	1	Possible reason identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks
19	1	Using Table 3 , calculate the monthly productivity of an analyst at Ansel's Analytics. Give your answer to one decimal place.	2
		AO2 = 2 • $203 \div 14 = \mathbf{14.5}$ reports per analyst per month 2 marks for correct answer with method. 1 mark for correct method but incorrect answer. 2 marks for a correct answer (14.5) with no working shown.	

Qu	Part	Marking guidance	Total marks												
19	2	Explain one benefit of increased labour productivity to a business such as Ansel's Analytics.	2												
		AO1 = 2 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2</td><td>2</td><td>Possible benefit explained.</td></tr><tr><td>1</td><td>1</td><td>Possible benefit identified.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Possible answers: • lower unit labour cost → greater margin on each client report • higher margin allows more competitive pricing or higher profits • ability to serve more clients without hiring more staff • potential to pay higher wages, aiding retention of skilled analysts • improved reputation for speed / reliability → more new clients <i>Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</i>		Level	Marks	Description	2	2	Possible benefit explained.	1	1	Possible benefit identified.		0	Nothing written worthy of credit.
Level	Marks	Description													
2	2	Possible benefit explained.													
1	1	Possible benefit identified.													
	0	Nothing written worthy of credit.													

Qu	Part	Marking guidance	Total marks
20		Draw and label demand and supply curves on the graph from the table. Clearly identify the equilibrium price and quantity.	3
		AO2 = 3 • 1 mark for correct drawing and labelling of the demand curve. • 1 mark for correct drawing and labelling of the supply curve. • 1 mark for correctly identifying the equilibrium price £30 and equilibrium quantity 30 units.	

Qu	Part	Marking guidance	Total marks															
21		Using Figure 2 and Table 4 , assess whether the benefits of growth for a business such as TechCo Solutions continue to exceed the costs as it becomes very large.	9															
		AO2 = 3, AO3 = 6 <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>3</td><td>7–9</td><td>A fully justified conclusion with sustained evaluation, coherent and relevant, with judgements supported by evidence. A full analysis of the economic evidence, a well-developed and logical chain of reasoning. Comprehensive application of knowledge and understanding of pertinent concepts/issues relevant to the context; specialist language used throughout.</td></tr><tr><td>2</td><td>4–6</td><td>A partially justified conclusion with an evaluation, mostly coherent and relevant; judgements may not be fully supported by evidence. An incomplete analysis of the economic evidence; starts to develop a chain of reasoning. Good application of knowledge and understanding of concepts/issues mostly relevant to the context; specialist language used mostly appropriately.</td></tr><tr><td>1</td><td>1–3</td><td>A basic conclusion or assertion may be present based on evaluative judgements supported by little or no evidence. Analysis of discrete points of the economic evidence with no chain of reasoning attempted. Basic application of knowledge and understanding of concepts/issues with limited relevance to the context; may use non-specialist language.</td></tr><tr><td></td><td>0</td><td>Nothing written worthy of credit.</td></tr></table> Indicative content: • Benefits (economies of scale): very substantial reduction in average cost per licence at first • technical economies — servers and automated testing have high fixed cost but low marginal cost • research-and-development is affordable at scale only (mentioned in Figure 2) • financial economies — lower borrowing costs for larger firms • risk-bearing economies — diversification across four markets • Data: AC at 5k = £250; AC at 10k = £210; AC at 20k = £180 → clear fall (economies of scale) • Costs (diseconomies of scale): communication and coordination problems between four offices (Figure 2) • loss of common company culture → possible weaker motivation / retention • decision-making becomes slower as the firm scales • Data: AC at 30k = £230; AC at 40k = £280 → costs rising sharply (diseconomies of scale) • Evaluation: benefits clearly exceed costs up to 20 000 licences; beyond that, costs exceed benefits; optimum scale ≈ 20 000 units		Level	Marks	Description	3	7–9	A fully justified conclusion with sustained evaluation, coherent and relevant, with judgements supported by evidence. A full analysis of the economic evidence, a well-developed and logical chain of reasoning. Comprehensive application of knowledge and understanding of pertinent concepts/issues relevant to the context; specialist language used throughout.	2	4–6	A partially justified conclusion with an evaluation, mostly coherent and relevant; judgements may not be fully supported by evidence. An incomplete analysis of the economic evidence; starts to develop a chain of reasoning. Good application of knowledge and understanding of concepts/issues mostly relevant to the context; specialist language used mostly appropriately.	1	1–3	A basic conclusion or assertion may be present based on evaluative judgements supported by little or no evidence. Analysis of discrete points of the economic evidence with no chain of reasoning attempted. Basic application of knowledge and understanding of concepts/issues with limited relevance to the context; may use non-specialist language.		0	Nothing written worthy of credit.
Level	Marks	Description																
3	7–9	A fully justified conclusion with sustained evaluation, coherent and relevant, with judgements supported by evidence. A full analysis of the economic evidence, a well-developed and logical chain of reasoning. - UK content quotas protect cultural diversity and support the UK creative industries (jobs, skills)
- subsidies for smaller UK platforms address barriers to entry (cost of original content, Item B)
- price caps protect lower-income households from being priced out of the market

No (against regulation):

- price caps may reduce investment in new content (Item B)
- the market is highly dynamic and cancellation is easy — consumer power may already be strong
- regulation creates compliance costs and may deter new foreign investment into UK production
- subsidies have an opportunity cost — funds taken from the NHS, schools or defence
- quotas risk reducing the quality of content if firms must meet arbitrary UK-production targets
- breaking up firms may reduce economies of scale in content production

Overall judgement:

- lighter intervention (e.g. funding requirements for public-service broadcasters) may be more proportionate than price caps or break-ups
- depends on how persistent market power proves to be as new entrants (Apple TV+, Paramount+) emerge
- short-run consumer gains from price caps vs. long-run impact on investment in UK content
- need to balance protecting UK creative industries with avoiding protectionist regulation

Note: This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.
